Astronomical coordinate systems are organized arrangements for specifying positions of satellites, planets, stars, galaxies, and other celestial objects relative to physical reference points available to a situated observer (e.g. the true horizon and north cardinal direction to an observer situated on the Earth's surface). Coordinate systems in astronomy can specify an object's position in ...

Un'eclissi lunare è un noto fenomeno ottico-astronomico, solitamente associato al sistema "Sole-Terra-Luna", durante il quale l'ombra della Terra oscura del tutto o parzialmente la Luna quando quest'ultima è illuminata dal Sole e interseca l'asse nodale, in fase di plenilunio. A causa delle reciproche distanze fra il Sole, la Luna e la Terra l'ombra che si introduce per interposizione di ...
