Because of the Earth's axial tilt, the Sun's assumed location shifts up and down slightly over the course of the year in this animation, appearing on the same horizontal plane as the Earth solely during the March and September equinoxes. The circle shows the Moon's anticipated path in the upcoming weeks, including the next 3 or 4 Moon phases.

### **Moon Phases Visualized - Moon Location**

The motions of the Moon around the Earth and of the Earth around the Sun are complex. The motions involved in revolutions are superimposed on the movements involved in rotations. The Earth and the Moon both turn on their own axis (rotation), but both also move around another object (revolution).
