Lessons from simple organisms. The remarkable effects of the typical 20–40% CR on aging and diseases in mice and rats are often viewed as responses evolved in mammals to adapt to periods of limited availability of food (Fontana and Klein, 2007; Fontana et al., 2010; Masoro, 2005; Weindruch and Walford, 1988). However, the cellular and molecular mechanisms responsible for the protective ...
