RAIL is a user-centric performance model that provides a structure for thinking about performance. The model breaks down the user's experience into key actions (for example, tap, scroll, load) and helps you define performance goals for each of them. RAIL stands for four distinct aspects of web app life cycle: response, animation, idle, and load.

So, if you observe a low basal body temperature in the second phase, you probably didn't ovulate at all. This situation isn't a cause for concern. In fact, some people experience several anovulatory cycles per year, which is completely normal. At other times, a faulty thermometer may be the culprit.
